PUMPWATCH Hi Return Pump

A simple, hand-pumped system to return fuel to over-ground storage tanks or, to return fuel to otherwise difficult to access fuel storage systems.

Pump meter accuracy inspection officials who after each test, were previously obliged to return fuel in 20L measures by climbing a ladder with each measure or, to dump the fuel into a collection drum for subsequent disposal by service station management may now return unlimited quantities of fuel in just two trips to the top of the tank – one to insert and attach the hose, the other to detach it after all the test fuel has been pumped back.

Can be used to connect to any PUMPWATCH Measure Pack discharge hose or siphon most of the fuel from traditional self standing measures

Easy to use hand pump returns 15 – 20 litres per minute

The Hi Return Pump is used in an upright position that allows the operator to stand straight to the pump and maximise its capacity. The contents of a 3-measure Multi Measure Pack as above (45L) are returned to storage in just 3 minutes!
